JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

LEPROSY IN NEW JERSEY.

The health officer at Passaic, N. J., reported July 21:

A case of leprosy was discovered at Passaic in April, 1911. The patient is a Chinese, aged 55 years, who has been employed as a laundryman. He has been in this country about eight years, and lived in New York City six years before coming to Passaic. The source of infection has not been determined. The case has been under observation since the time of discovery.

SMALLPOX IN THE UNITED STATES.

In the following tables the States indicated by an asterisk are those from which reports of smallpox are received only from certain city, and in some cases county, boards of health. In these States, therefore, the recorded cases and deaths should not be taken as showing the general prevalence of the disease. In the States not marked by an asterisk the reports are received monthly from the State boards of health and include all cases reported throughout the State.

Reports Received During Week Ended July 28, 1911.
